

PARAFINE OILS

(Paraffinic Process Oils)

PARAFINE OILS are highly refined, dewaxed, paraffinic mineral oils intended for non-lubricating processes. They have a high viscosity index, are light colored, and are utilized for a wide variety of applications. The grade reflects the SAE viscosity at 100 C. These oils contain neither antifoam nor additives.

APPLICATIONS:

- Dilution agent for inks and petroleum
- Form release oil
- Process oil in rubber and plastic manufacturing
