

# Preserve your equipment investment with **FINA CHECK**

*Diagnose equipment problems before they occur, ensure longer equipment life, and reduce unscheduled downtime.*

Just as you count on FINA lubricants for superior performance and longer engine life, you can count on FINA CHECK for diagnostic technology that troubleshoots problems and preserves your equipment investment for the long haul.

FINA CHECK can be used for all types of engines, transmissions, gearboxes, differentials and hydraulic systems—from passenger cars to earthmovers, and is available to all FINA Lubricant customers.

#### **Here is how it works:**

Customers send lubricant, antifreeze or fuel samples to the FINA CHECK lab. There, using the latest diagnostic technology and in-depth knowledge of equipment performance and chemistry, lab personnel assess the condition of the fluid and recommend appropriate maintenance measures.

FINA CHECK analyses and recommendations are to the point and easily understood. Customers are made aware of potential equipment malfunctions and have the information tool necessary to spot early warning signs of possible problems. FINA CHECK identifies the type and source of any contamination. FINA CHECK also monitors fluid breakdown, corrosion and wear.

To prolong your equipment life, find out more about FINA CHECK. Together, FINA CHECK and high quality FINA lubricants provide the best means for maintaining your equipment investment.

#### **FINA CHECK**

- Reduces engine downtime
- Keeps your fleet/equipment on the job
- Is simple to use
- Provides rapid internet results
- Offers to-the-point analyses and recommendations
- Allows you to correct problems before equipment failure, and perform minor repairs instead of major overhauls
